

The Eco-Capital System was created to serve as a bridge between the growing global ecological awareness and the traditional capitalist financial marketplace.

The ECO-Capital Foundation was created to manage non for profit funds to be invested into a variety of ecologically sound projects. The manifestation of these goals are investments in the preferred group of environmental companies and non for profit self sustainable projects which comprise the ECO-Capital Ideals. It is through in depth research into environmental products that all of its efforts on these products or services will most likely reverse the deterioration of the environment that we live in today.

The Foundation is set up as a self-sustainable system devoted into special interest areas each working independently but organized to reach the common goal of ECO-Capitalism.

Investors can contribute to the fund by providing tax-free donations or by investing in certain companies directly. These funds will then be used to finance chosen environmental companies and projects.

ECO-CAPITAL MARKETING provides high level professional marketing services, as well as research and public relations. These services extend themselves into such areas as the sponsorship of educational facilities, ECO-UNIVERSITIES, and to invest in new inventions and projects.

ECO-CAPITAL PROJECTS.
